

Calendar in Outlook Web App

Your calendar lets you create and track appointments and meetings. You can create multiple calendars, link to other people's calendars, and even share your calendar with other people in your organization.

What you'll see in Calendar

After your Inbox, the calendar is probably where you'll spend the most time when using Outlook Web App. You can view your calendar four different ways: **Day**, **Work week**, **Week**, and **Month**.

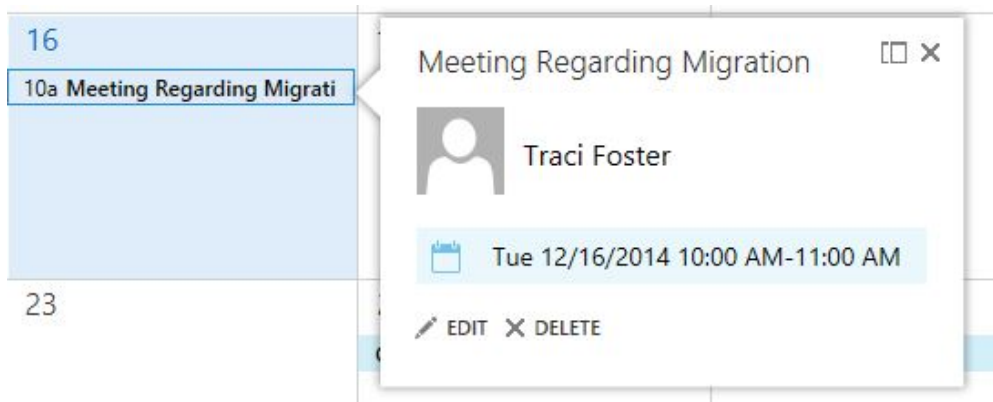

Quickly view event details

You can click any event in your calendar to see a quick view of that event.

An event that you create will show you as the creator and have a link to edit or delete the event.

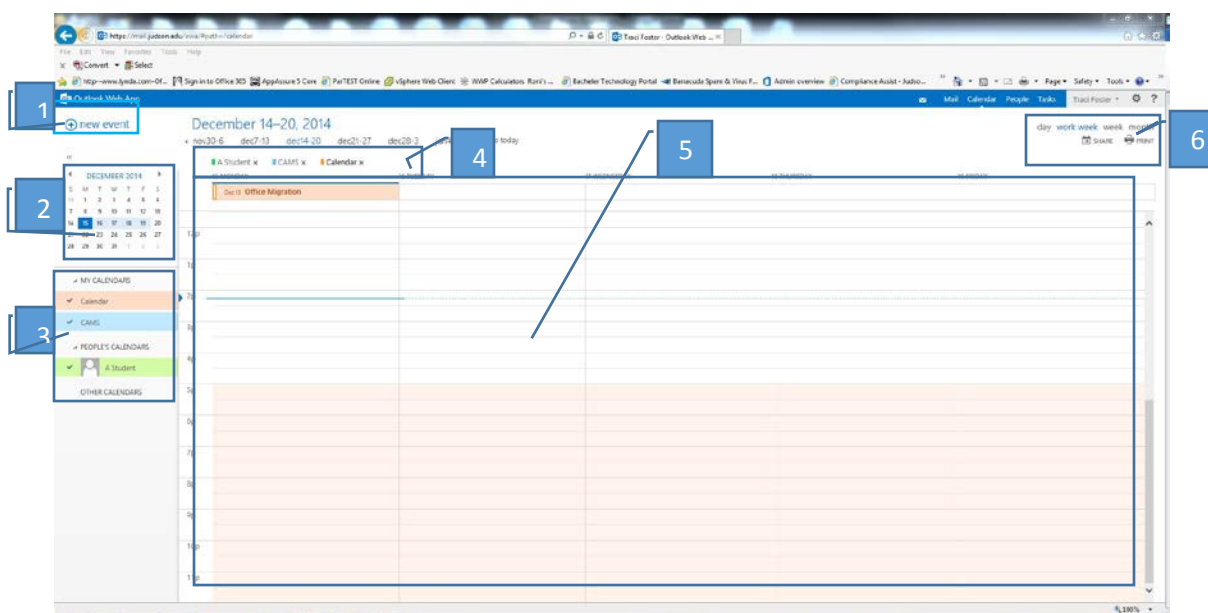

A meeting that you've been invited to will show the organizer and include links to respond to the invitation. If the organizer has included an online meeting invitation, you'll see a link to join the meeting.

Week view

Week view is the default view when you first visit your calendar in Outlook Web App. You can change that to **Day**, **Work week**, or **Month** by using the options in the upper corner.

1. Create a new event by clicking **+New event**. An event can be an appointment, a meeting, or an all-day event.
2. Use the calendars to navigate from one date to another. Shading indicates the week you're currently viewing, and darker shading marks the current date. You can use the calendar icon at the top to collapse or expand this side of the calendar view.
3. You can view more than one calendar at a time. This section lets you create other calendars, such as a calendar just for a specific project or to track personal appointments. You can also add other people's calendars and select which to display. If you select multiple calendars to display, they'll be merged into a single view with each calendar given a different color.
4. This is another area that you can use to navigate from one day to another. Click any date to jump to that date. Or click the arrows on either end to see the dates before or after those displayed.
5. The main window, where calendars will be displayed. Double-click any white space in this window to create a new calendar item. Or, click and drag to create a new item in the time you've selected.
6. Select the view you want, and share or print your calendar.

Day view

The day view is most useful if you have a very busy schedule, or if you want to view multiple schedules side by side. The controls remain the same, only the view has changed.

Month view

The month view can be very crowded. To make it more usable, there's an agenda displayed for the selected day:

1. Shading shows the current date.
2. Slightly lighter shading shows the selected month.
3. Shading shows the selected day and the number tells how many non-displayed items there are on each day. Double-click an item to open it. You can create a new event on any date by double-clicking the white space on that date.
4. Shaded item is an all-day event.
5. The agenda for the selected day. You can create a new item on the current date by double-clicking the white space in the agenda.

Open an event in a separate window

By default, you read and create events on an overlay on the main calendar page, but that isn't always what you need. Sometimes you need to be able to view an event in a separate window. You can pop any event out into a new window by clicking the pop-out icon  in the upper corner of the message.

Creating calendar items

To open a new calendar item in any view, you can click **+New event** or double-click any white space. In the day, work week, and week view, you can click or drag to select a block of time. Or you can type the subject directly on the calendar. Double-click the new item to open it and add other details.

Create an appointment

Click **+New event** or double-click the calendar to open a new calendar item form.

The screenshot shows a 'New Event' form with the following fields and controls:

- Event:** A text input field for the event title.
- Location:** A text input field for the event location.
- Attendees:** A text input field for adding attendees.
- Start:** A date and time picker showing 'Mon 3/3/2014 4:30 PM'.
- Duration:** A dropdown menu showing '30 minutes'.
- Show as:** A dropdown menu showing 'Busy'.
- Reminder:** A dropdown menu showing '15 minutes'.
- Calendar:** A dropdown menu showing 'Calendar'.
- Repeat:** A dropdown menu showing 'Never'.
- Make as private:** A checkbox that is currently unchecked.
- Notes:** A large text area at the bottom for additional information.

1. Enter a short description of the event.
2. Add a location if you want.
3. Select the starting date and time.
4. Select the duration. Select **All day** for an all-day event. All-day events appear at the top of the calendar.

If the duration you want isn't displayed, select **Custom** at the bottom of the list. You can then enter an end time instead of selecting a duration.

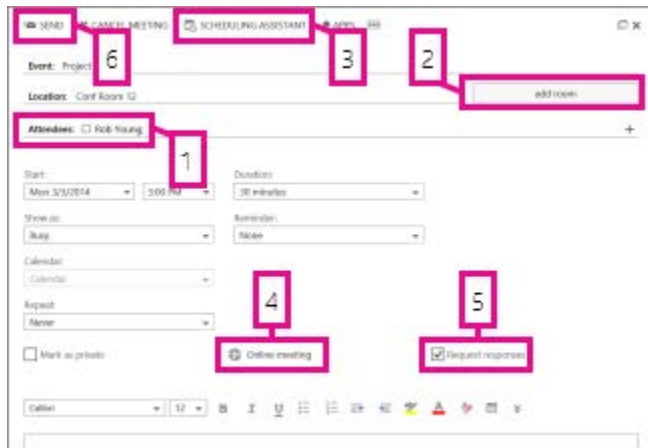

5. Use **Show as** to choose how you want the time to appear on your calendar.
6. Change or turn off the reminder.
7. If you have more than one calendar, choose which calendar to save it to.
8. Set a repeating pattern if you want this event to repeat.
9. Mark it as **Private** if you don't want anyone you've shared your calendar with to see the details.
10. Use the **Notes** area to add any other information you want.
11. Click **Save** to save your changes or **Discard** to cancel.

Top of Page

Create a meeting

A meeting is a calendar event that you send to other people. You create a meeting the same way you do an appointment, but you invite attendees and may add a resource such as a conference room.

After you've selected **+New event**, you follow most of the same steps. To turn a calendar item into an invitation, start by entering the names of people you want to invite in the **Attendees** field.

1. You can type names directly in the **Attendees** field to add them.
2. Enter a location, or select **Add a room** to see a list of available conference rooms from your organization's address book. Select **Scheduling Assistant** to show the calendars of attendees. You can also add or remove attendees and automatically schedule resources such as conference rooms.
3. To see the availability of attendees and conference rooms, select **Scheduling Assistant**. When you're done, click **✓OK** to save your changes or **✗Discard** to cancel. Either will take you back to the event form where you can make any other changes you want before sending. For more information, see [Using the Scheduling Assistant](#).
4. If online meetings are enabled for your account, you can add an online meeting link by selecting **Online meeting**.
5. By default, **Request responses** is turned on, but you can turn it off if you don't want to know who has accepted or declined the invitation. If you leave request responses on, you'll receive a message as each attendee accepts or declines your invitation.
6. Click **✉Send** to save your changes and send the invitation to the attendees or **✗Discard** to cancel.

Sharing your calendar

With a few clicks, you can share your calendar with other people in your organization.

Start by clicking **➦Share** at the top of the calendar window.

SEND DISCARD

Share with:

Subject:
I'd like to share my calendar with you

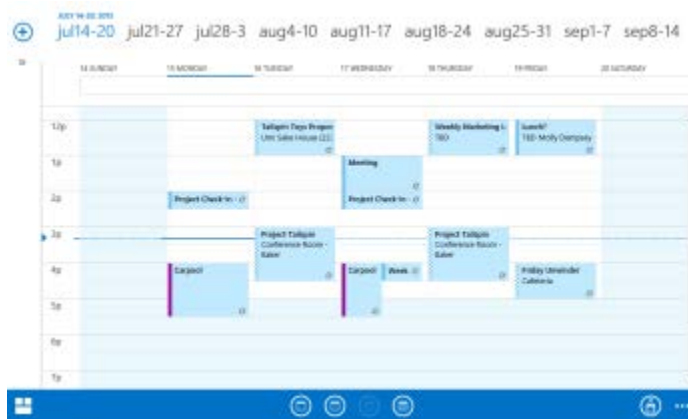

Calendar:
Calendar

1. Enter the name of the person you want to share your calendar with in the **Share with** box. Outlook Web App will automatically search for them in the address book.
2. After they've been found, they'll be automatically added to the list of people to share with. You can add as many people as you want.
3. You can edit the subject if you like.
4. If you have more than one calendar, choose which you want to share. Most people share their default calendar (called Calendar), but you can share any calendar that's part of your mailbox.
5. After you've added everyone you want to share with and what level of access you want them to have, click **SEND** to send the sharing invitation to the people you've added, or **DISCARD** to cancel.

For more information about sharing calendars, see [Sharing your calendar and Calendar Delegation in Outlook Web App](#).

Using Outlook Web App on a mobile device

If you're using Outlook Web App on a mobile device, such as a tablet or smart phone, you may see something different from the images above.

Most features work the same as they do when you're using Outlook Web App on a desktop or laptop computer, but you do some things a little bit differently.

Tap the navigation icon  in the lower corner to switch between Mail, Calendar, and People.

To change the calendar view, tap day view , work week view , week view , or month view . To jump to today, tap . Tap the more icon  to see more selections. If you're using a smart phone, only the day and month views will be available.

You create new items by tapping the new item icon . Tap the chevron icons  « to expand or collapse the part of the screen they appear on.

To get to Options when you're using a mobile device, tap the more icon , then tap **Options**. For more information see [Options on a mobile device](#).

How do I create a new calendar?

You can use the context menu to create additional calendars for your account as needed. For example, you might want to create a separate calendar for project deadlines, or for a sports team schedule. To create a new calendar:

1. In the calendar navigation pane, right-click the calendar group that you want to create a new calendar in. Or, if you're using a touch device, touch and hold the calendar group. **My calendars** is a good place to create a calendar unless you're going to be creating a lot of calendars. If you expect to create a lot of calendars, you might want to create calendar groups to organize them.
2. Select **New calendar**.
3. Enter a name for your new calendar.
4. Press Enter.

Managing multiple calendars

- To add a calendar to or remove it from your calendar view, select it to turn the check mark on or off. You can also select the **x** next to the name at the top of the calendar window to close that calendar but not remove it from your calendar list.
- You can use the context menu to rename, delete, share, update permissions, or change the color of calendars that you own. To open the context menu, right-click if you're using a mouse, or touch and hold if you're using a touch device.
- If you've added a calendar that belongs to someone else to your calendar view, the context menu will let you rename, remove, or change the color of that calendar.

Viewing more than one calendar at a time

- You can add as many calendars as you want to your account, and can view up to ten at a time. If you're using the **Week**, **Work week**, or **Month** view and have turned on more than one calendar, they will be merged into a single view. The color of each calendar lets you know which items belong to which calendar. The background color of non-work hours will also change to match the active calendar.

- If you're using the **Day** view, you can view multiple calendars merged, or you can split them so that they appear side-by-side in the calendar window.
- When you're viewing multiple calendars, you can change which one is active by selecting it at the top of the calendar window.

Creating items in different calendars

- When you create a new calendar item by selecting **New event** or by selecting a time on the calendar, and the active calendar is one of yours, the new item will be created on the active calendar. You can change the calendar by selecting an available calendar from the **Calendar** list on the new item form. By selecting different colors for each calendar, you can tell which calendar is active, and which calendar an item has been saved in.
- To move an item to a different calendar, edit it and select the calendar you want to move it to from the **Calendar** list.
